April	W2		Data Types	
April	W3		Errors & Output Handling	
April	W4	Function	types of function (built-in functions, functions defined in module, user defined functions), creating user defined function, arguments and parameters, default parameters, positional parameters, function returning value(s), flow of execution, scope of a variable (global scope, local scope)	Function Fundamentals: Recap the concept of functions, parameters, return values, and local vs. global variables. Introduce recursion with simple examples.
April	W5	Exception Handling	Introduction, handling exceptions using try-except-finally blocks	Lab Work, Based on identified areas needing revision, conduct focused sessions on specific topics. This could involve project presentations, group discussions, and collaborative problem-solving activities.

Subject: CS

Month	Week	Topics	Sub Topics	Activities
May	W1	File Handling	Introduction to files, types of files (Text file, Binary file, CSV file), relative and absolute paths, Text file: opening a text file text file open modes (r, r+, w, w+, a, a+), closing a text file, opening a file using with clause, writing/appending data to a text file using write() and writelines(), reading from a text file using read(), readline() and readlines(), seek and tell methods, manipulation of data in a text file	Explain different file handling operations (read, write, append) and file modes (text vs. binary). Demonstrate basic file operations using Python code examples.
May	W2		Binary file: basic operations on a binary file: open using file open modes (rb, rb+, wb, wb+, ab, ab+), close a binary file, import pickle module, dump() and load() method, read, write/create, search, append and update operations in a binary file, CSV file: import csv module, open / close csv file, write into a csv file using writer(),writerow(),writerows() and read from a csv file using reader()	Practical Applications: Students participate in coding exercises where they write programs to read data from a file, perform operations on the data (e.g., calculate statistics), and write the result to a new file.
May	W3	Stack	Stack, operations on stack (push & pop), implementation of stack using list.	Introduce the concept of a stack (LIFO - Last In First Out) data structure, its real-world applications, and basic operations (push, pop, peek) Implementation and Applications: Explore Python libraries for stack implementation or write code to create a custom stack class. Students practice solving problems using stacks (e.g., balancing parentheses, expression evaluation).
